FIXED PITCH PROPELLER

SAFETY, PERFORMANCE, AFFORDABILITY AND SERVICE

2-blade/4-blade

Fixed Pitch Propeller

With over 65 years of experience in the design and manufacture of fixed-pitch wooden propellers, we have developed solutions for a wide range of applications. Whether historic aircraft, wind tunnels or tunnel ventilation systems, drones, motor gliders or light sport aircraft (LSA) – the HO series offers a cost-effective, low-vibration and ecological wooden propeller everywhere.

We manufacture 2- or 4-blade propellers, with or without leading edge fittings, in a nostalgic vintage look with differently stained blades and clear varnish, as well as with fiberglass sheathing, in diameters from 50 cm to 250 cm. Numerous variants are possible, as our manufactory is prepared to meet customer-specific requirements.

Our paint shop is also equipped for customer-specific paintwork and will be pleased to advise you.

In addition to our experienced production facility, we also carry out propeller overhauls and repairs.
